

C L A I M S

1. A high pullulan content liquid, which has a viscosity of 2.5 mm²/s or more in terms of a pullulan concentration of 10% (w/w) when determined at 30°C on the Ubelode viscometer method, a common bacterial count of less than 300 cells/g product, a negativity with respect to coliform group, a pH of 4.5 to 7.5, and a pullulan concentration of 20% (w/w) or more.

2. The high pullulan content liquid of claim 1, wherein said pullulan has a weight-average molecular weight (MW) of 5,000 to 500,000.

3. The high pullulan content liquid of claim 1 or 2, which is in the form of an aqueous pullulan solution.

4. The high pullulan content liquid of claim 1, 2 or 3, which further contains one or more disinfectants and/or bacteriostats.

5. The high pullulan content liquid of claim 4, wherein said disinfectants and/or said bacteriostats are ethanol.

6. A method for transporting a high pullulan content liquid, which comprises a step of transporting said high pullulan content liquid under a temperature condition of 14°C or lower.

7. A method for transporting the high pullulan content liquid of claim 4 or 5 under a temperature condition of 37°C or lower.
